

The Link Wheel Village

Superior Link Wheel Concept Building Guide

Welcome to my guide for your personal link wheel village system with which you can highly increase the google ranking and link power of any site.

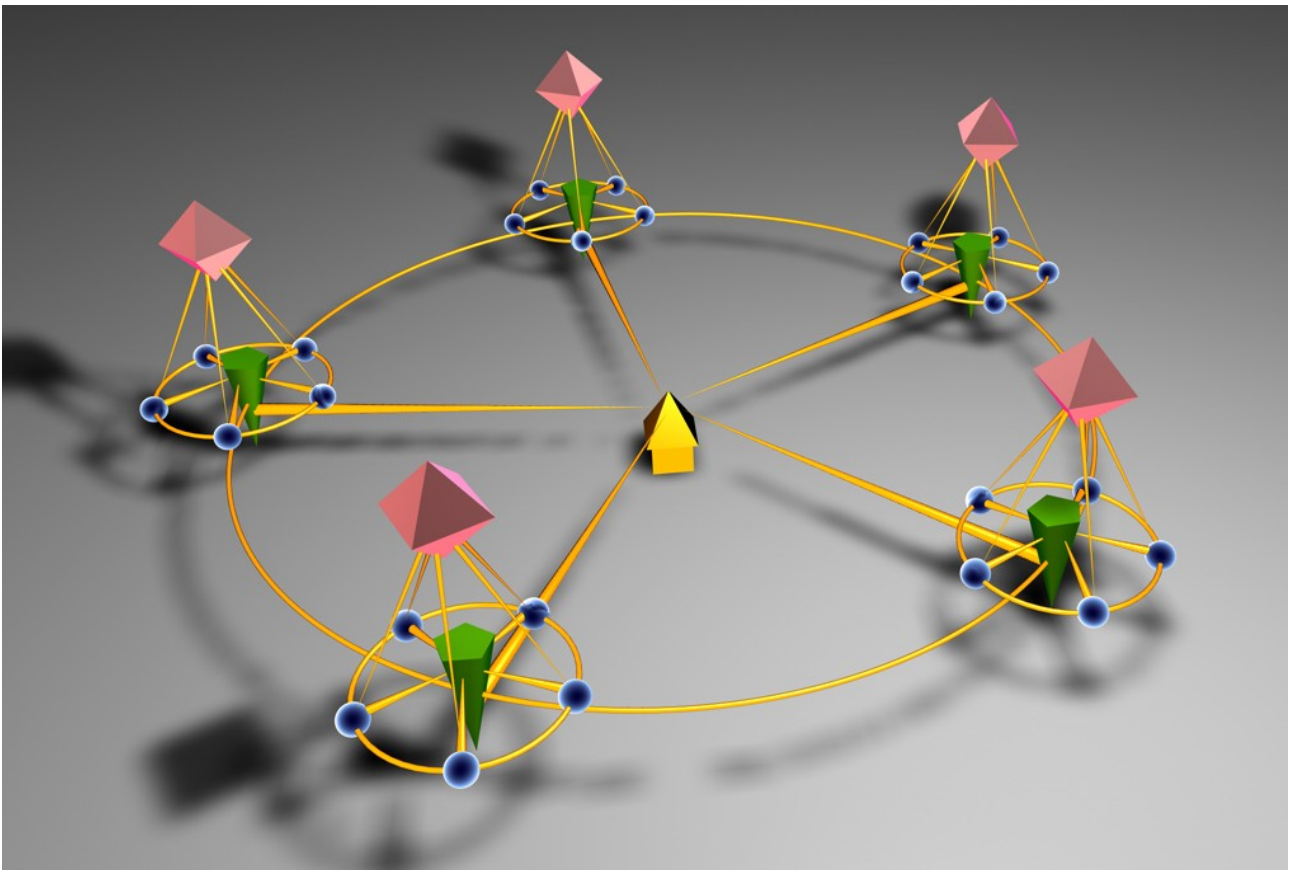

To make use of this guide, you will need access to a xrumer server!

To start, chose a main site, which should be boosted and make sure it has at least some decent on-page-optimizing applied. Check the following items to continue with link wheel building:

- SEOfriendly title tags
- unique, spiderable content
- use of <h1>, <h2> etc
- meta keywords
- meta description
- valid code

There are more relevant factors but I think, these few are a solid base to get your site indexed and ranked.

Now, we start to create our link wheel village. To get a short overview, I will show you what it will look like in the end:

Yes I know, it looks confusing but in fact, it is clearly structured and easy to understand.

The Site Set-up:

For this link wheel, you have to set up some sites with specific content mentioned below. Make sure that they are on different domains and are not so spam:

Reddish Pyramid :

A good choice here would be autoblogs with theme relevant content from different rss feeds or whatever you prefer.

You will need 5 of them.

Blue Balls:

Create some web 2.0 sites like microblogs with little content or whatever.

You will need $5 \times 5 = 25$ of them.

Green Pyramid:

Here should be some unique content with keyword relevance. Web 2.0 properties with at least 2-3 articles are highly recommended.

You will need 5 of them.

Yellow House :

This is your main site! Make sure you applied the criteria mentioned at the beginning of this document.

You just need 1.

The Link Building:

The power of this system, is the link structure symbolized by the yellow “lines”

Red Pyramid :

Get these 5 sites blasted by a huge amount of xrumer links. Theoretical, there is no link limit for them.

But you have to make sure, that each **Red Pyramid** has only 5 different outgoing links, pointing to the **Blue Balls**.

Blue Balls:

You will need no additional incoming links for these sites. Just make sure that the **Blue Balls** are connected like in the “traditional” link wheel method and that each site has got a link to the **Green Pyramid**.

Green Pyramid:

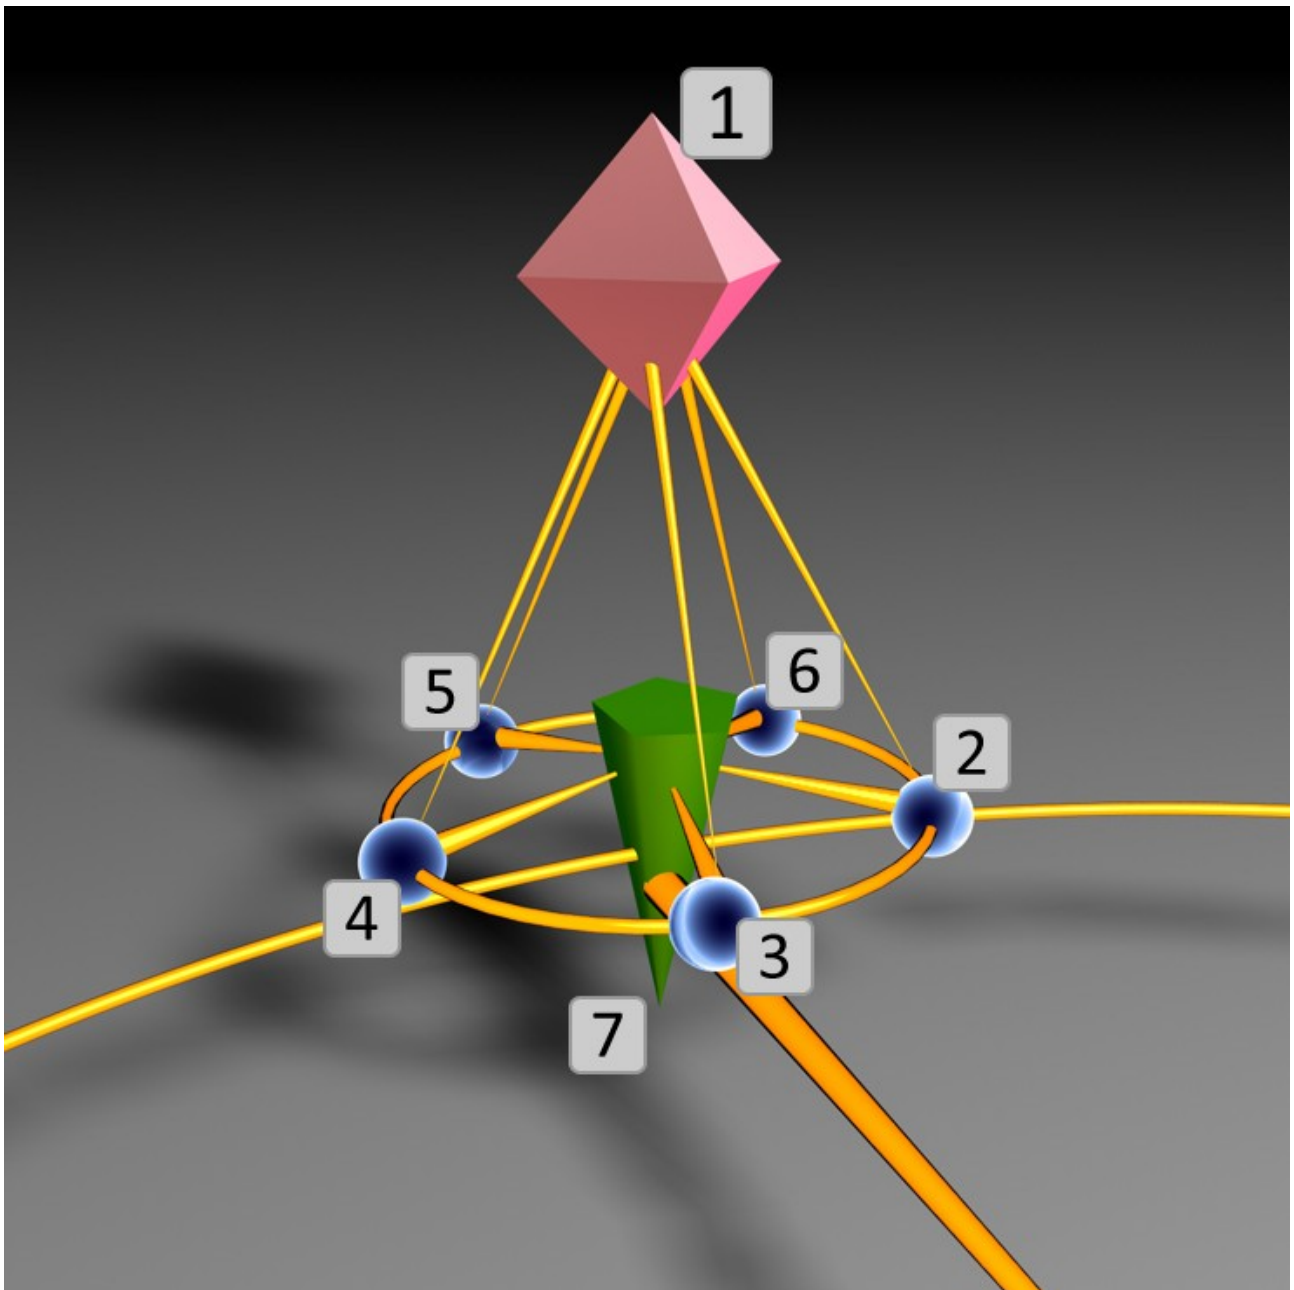

This part of the system links to the other **Green Pyramids** in the “traditional” link wheel style and has an outgoing link to your **Yellow House**.

Yellow House:

Nothing to do, just wait and see it scraping the SERPs!

That's all, now you are done.

Check the next page if you want to get a link building example.

[1] **Red Pyramid:** Your xruer blasted site: it links to [2], [3], [4], [5] and [6]

[2] **Blue Ball 1:** Your microblog: links to [3] and [7]

[3] **Blue Ball 2:** Your microblog: links to [4] and [7]

[4] **Blue Ball 3:** Your microblog: links to [5] and [7]

[5] **Blue Ball 4:** Your microblog: links to [6] and [7]

[6] **Blue Ball 5:** Your microblog: links to [2] and [7]

[7] **Green Pyramid:** Your inner ring: links to your main site and to the other **Green Pyramids** like the **Blue Balls** do with each other.
